 DH

- A method, comprising the steps of:
 receiving a frame of data having a predetermined number of time slots;
 receiving a plurality of data symbols in each respective time slot; and
 receiving a primary, a secondary and a tertiary synchronization code in each said
 predetermined number of time slots.
- 2. A method as in claim 1, wherein the secondary and the tertiary synchronization codes identify a subset of codes.
- 3. A method as in claim 2, wherein the secondary and tertiary synchronization codes are formed from a predetermined order of synchronization code elements, the predetermined order corresponding to the subset of codes.
- 4. A method as in claim 1, wherein the secondary and tertiary synchronization codes are formed from a predetermined order of common synchronization code elements.
- 5. A method as in claim 1, wherein a mobile receiver identifies a first time slot of the frame by the tertiary synchronization code.

Cancel claims 6-12.

Art Unit: 2685

13. A method, comprising the steps of: transmitting a frame of data having a predetermined number of time slots; transmitting a plurality of data symbols in each respective time slot; and transmitting a primary, a secondary and a tertiary synchronization code in each said predetermined number of time slots.

- 14. A method as in claim 13, wherein the secondary and the tertiary synchronization codes identify a subset of codes.
- 15. A method as in claim 14, wherein the secondary and tertiary synchronization codes are formed from a predetermined order of synchronization code elements, the predetermined order corresponding to the subset of codes.
- 16. A method as in claim 13, wherein the secondary and tertiary synchronization codes are formed from a predetermined order of common synchronization code elements.
- 17. A method as in claim 13, wherein the tertiary synchronization code order corresponds to an order of time slots in the frame.

Cancel claims 18-24.
